1 Internet nuggets: Internet nuggets

Mark Thorson

September 2002 **ACM SIGARCH Computer Architecture News**, Volume 30 Issue 4Full text available: [pdf\(617.72 KB\)](#) Additional Information: [full citation](#)

2 A brief survey of current work on network attached peripherals (extended abstract)

Rodney Van Meter

January 1996 **ACM SIGOPS Operating Systems Review**, Volume 30 Issue 1Full text available: [pdf\(725.39 KB\)](#) Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

Work on network-attached peripherals (NAPs) can be divided into essentially three areas --- device interfaces and protocols, multimedia use and mass storage use. This paper is an extended abstract reviewing some of the current work and provides references and WWW pointers to many of the projects. The impact of this technological advance on operating systems is discussed. The primary purpose of this paper is to broaden understanding of the advantages and pitfalls of NAPs and encourage further res ...

3 Reliability: Devirtualizable virtual machines enabling general, single-node, online maintenance

David E. Lowell, Yasushi Saito, Eileen J. Samberg

October 2004 **Proceedings of the 11th international conference on Architectural support for programming languages and operating systems**Full text available: [pdf\(174.01 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Maintenance is the dominant source of downtime at high availability sites. Unfortunately, the dominant mechanism for reducing this downtime, cluster rolling upgrade, has two shortcomings that have prevented its broad acceptance. First, cluster-style maintenance over many nodes is typically performed a few nodes at a time, making maintenance slow and often impractical. Second, cluster-style maintenance does not work on single-node systems, despite the fact that their unavailability during mainte ...

Approaches to fault-tolerant and transactional mobile agent execution---an algorithmic

view

Stefan Pleisch, André Schiper

September 2004 **ACM Computing Surveys (CSUR)**, Volume 36 Issue 3

Full text available:  pdf(946.94 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Over the past years, mobile agent technology has attracted considerable attention, and a significant body of literature has been published. To further develop mobile agent technology, reliability mechanisms such as fault tolerance and transaction support are required. This article aims at structuring the field of fault-tolerant and transactional mobile agent execution and thus at guiding the reader to understand the basic strengths and weaknesses of existing approaches. It starts with a discu ...

5 Interconnect design and optimization: Topology optimization for application-specific networks-on-chip 

Tapani Ahonen, David A. Sigüenza-Tortosa, Hong Bin, Jari Nurmi

February 2004 **Proceedings of the 2004 international workshop on System level interconnect prediction**

Full text available:  pdf(624.12 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Compared to the well understood macro networks, networks-on-chip introduce novel design challenges. The characteristics of the system data flows and the knowledge of the required wire lengths can be exploited to optimize for speed and power consumption. A component library for flexible construction of interconnection architectures is being developed at the Tampere University of Technology to enable the creation of application development platforms. The overall design flow of these development pl ...

6 Workshop on testing, analysis and verification of web services (TAV-WEB) papers: 

Testing web database applications

Yuetang Deng, Phyllis Frankl, Jiong Wang

September 2004 **ACM SIGSOFT Software Engineering Notes**, Volume 29 Issue 5

Full text available:  pdf(110.98 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

Commercial, scientific, and social activities are increasingly becoming dependent on Web database applications. New testing techniques that handle the unique features of these systems are needed. To that end, we have extended AGENDA, a tool set for testing relational database applications, to test web database applications. Application source code is analyzed to extract relevant information about the URLs and their parameters. This information is used to construct and simplify a graph in which n ...

7 Proceedings - only: Distributed object invocation in OBIWAN 

Luís Veiga, João Garcia, João Silva, Paulo Ferreira

September 2000 **Proceedings of the 9th workshop on ACM SIGOPS European workshop: beyond the PC: new challenges for the operating system**

Full text available:  pdf(224.75 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

The need for sharing is well-known in a large number of distributed collaborative applications. These applications are difficult to develop for an environment in which network connections are slow and not reliable. For this purpose, we developed a platform called OBIWAN that: i) allows the application programmer to decide the mechanism by which objects should be invoked, remote method invocation or invocation on a local replica, and ii) provides hooks for the application programmer to implement a ...

8 Client-server computing in mobile environments

Jin Jing, Abdelsalam Sumi Helal, Ahmed Elmagarmid

June 1999 **ACM Computing Surveys (CSUR)**, Volume 31 Issue 2

Full text available:  [pdf\(233.31 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Recent advances in wireless data networking and portable information appliances have engendered a new paradigm of computing, called mobile computing, in which users carrying portable devices have access to data and information services regardless of their physical location or movement behavior. In the meantime, research addressing information access in mobile environments has proliferated. In this survey, we provide a concrete framework and categorization of the various way ...

9 Session 5: Distributed storage: Let's put NetApp and CacheFlow out of business!

Eran Gabber, Elizabeth Shriver

September 2000 **Proceedings of the 9th workshop on ACM SIGOPS European workshop: beyond the PC: new challenges for the operating system**

Full text available:  [pdf\(182.20 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#)

We believe that a lightweight and portable specialized file system library can provide applications with performance close to that of special-built appliances running on closed proprietary operating systems. Moreover, the application may execute on commodity hardware with a general-purpose operating system, and with minimal changes to the application source code. Such a file system would allow anyone to build cheap, high-performance appliances. We present the design of Hummingbird, a file system ...

10 Mobile computing: DataMan project perspective

Tomasz Imielinski

December 1996 **Mobile Networks and Applications**, Volume 1 Issue 4

Full text available:  [pdf\(239.53 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The objective of mobile computing is to develop system and application level software for small, battery powered terminals equipped with the wireless network connection. There is a rapidly growing interest in this field with companies spending billions of dollars developing technology and buying spectrum in the recent PCS auctions. In this paper we offer a perspective of mobile computing from the standpoint of our own research project at Rutgers University. The DataMan project (T.Imielinski ...

11 Firmato: A novel firewall management toolkit

Yair Bartal, Alain Mayer, Kobbi Nissim, Avishai Wool

November 2004 **ACM Transactions on Computer Systems (TOCS)**, Volume 22 Issue 4

Full text available:  [pdf\(917.80 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In recent years packet-filtering firewalls have seen some impressive technological advances

(e.g., stateful inspection, transparency, performance, etc.) and wide-spread deployment. In contrast, firewall and security <i>management</i> technology is lacking. In this paper we present <i>Firmato</i>, a firewall management toolkit, with the following distinguishing properties and components: (1) an entity-relationship model containing, in a unified form, global knowledge of the sec ...

12 Practical byzantine fault tolerance and proactive recovery

Miguel Castro, Barbara Liskov

November 2002 **ACM Transactions on Computer Systems (TOCS)**, Volume 20 Issue 4

Full text available:  pdf(1.63 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Our growing reliance on online services accessible on the Internet demands highly available systems that provide correct service without interruptions. Software bugs, operator mistakes, and malicious attacks are a major cause of service interruptions and they can cause arbitrary behavior, that is, Byzantine faults. This article describes a new replication algorithm, BFT, that can be used to build highly available systems that tolerate Byzantine faults. BFT can be used in practice to implement re ...

Keywords: Byzantine fault tolerance, asynchronous systems, proactive recovery, state machine replication, state transfer

13 Disconnected operation in the Coda File System

James J. Kistler, M. Satyanarayanan

February 1992 **ACM Transactions on Computer Systems (TOCS)**, Volume 10 Issue 1

Full text available:  pdf(1.59 MB)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Disconnected operation is a mode of operation that enables a client to continue accessing critical data during temporary failures of a shared data repository. An important, though not exclusive, application of disconnected operation is in supporting portable computers. In this paper, we show that disconnected operation is feasible, efficient and usable by describing its design and implementation in the Coda File System. The central idea behind our work is that cache ...

Keywords: disconnected operation, hoarding, optimistic replication, reintegration, second-class replication, server emulation

14 Promises and reality: Performance measurements of a user-space DAFS server with a database workload

Samuel A. Fineberg, Don Wilson

August 2003 **Proceedings of the ACM SIGCOMM workshop on Network-I/O convergence: experience, lessons, implications**

Full text available:  pdf(366.48 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We evaluate the performance of a user-space Direct Access File System (DAFS) server and Oracle Disk Manager (ODM) client using two synthetic test codes as well as the Oracle database. Tests were run on 4-processor Intel Xeon-based systems running Windows 2000. The systems were connected with ServerNet II, a Virtual Interface Architecture (VIA) compliant system area network. We compare the performance of DAFS/ODM and local-disk based I/O, measuring I/O bandwidth and latency. We also compare the r ...

15 Disconnected operation in the Coda file system

James J. Kistler, M. Satyanarayanan

September 1991 **ACM SIGOPS Operating Systems Review , Proceedings of the thirteenth ACM symposium on Operating systems principles**, Volume 25 Issue 5

Full text available: [!\[\]\(30072721fe92392a2d7c953be68f714a_img.jpg\) pdf\(1.39 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Disconnected operation is a mode of operation that enables a client to continue accessing critical data during temporary failures of a shared data repository. An important, though not exclusive, application of disconnected operation is in supporting portable computers. In this paper, we show that disconnected operation is feasible, efficient and usable by describing its design and implementation in the Coda File System. The central idea behind our work is that *caching of data*, now ...

16 Deploying the Squid Proxy Server on Linux

Ian Sparke

March 2001 **Linux Journal**

Full text available: [!\[\]\(7453c0f29ed3a7dcecf77fe714fbbf84_img.jpg\) html\(24.89 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Ian gives an example of the installation, configuration and maintenance of this multi-tentacled invertebrate proxy server.

17 Replication requirements in mobile environments

David Ratner, Peter Reiher, Gerald J. Popek, Geoffrey H. Kuenning

November 2001 **Mobile Networks and Applications**, Volume 6 Issue 6

Full text available: [!\[\]\(007bb571fc5331b364ae27ddf8a1c148_img.jpg\) pdf\(162.59 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Replication is extremely important in mobile environments because nomadic users require local copies of important data. However, today's replication systems are not "mobile-ready". Instead of improving the mobile user's environment, the replication system actually hinders mobility and complicates mobile operation. Designed for stationary environments, the replication services do not and cannot provide mobile users with the capabilities they require. Replication in mobile environments requires fu ...

18 Promises and reality: Server I/O networks past, present, and future

Renato John Recio

August 2003 **Proceedings of the ACM SIGCOMM workshop on Network-I/O convergence: experience, lessons, implications**

Full text available: [!\[\]\(ca98a5155d318582532d305def5ccfdd_img.jpg\) pdf\(225.62 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Enterprise and technical customers place a diverse set of requirements on server I/O networks. In the past, no single network type has been able to satisfy all of these requirements. As a result several fabric types evolved and several interconnects emerged to satisfy a subset of the requirements. Recently several technologies have emerged that enable a single interconnect to be used as more than one fabric type. This paper will describe the requirements customers place on server I/O networks; t ...

19 An application of a context-aware file system

Christopher K. Hess, Roy H. Campbell

December 2003 **Personal and Ubiquitous Computing**, Volume 7 Issue 6Full text available: [pdf\(383.26 KB\)](#) Additional Information: [full citation](#), [abstract](#), [index terms](#)

Ubiquitous computing environments stretch the requirements of traditional infrastructures used to facilitate the development of applications. Activities are often supported by collections of applications, some of which are automatically launched with little or no human intervention. This task-driven environment challenges existing application construction and data management techniques. In this paper, we describe a file system that organises application data based on contextual information, impo ...

20 Enabling dynamic content caching for database-driven web sites

K. Selcuk Candan, Wen-Syan Li, Qiong Luo, Wang-Pin Hsiung, Divyakant Agrawal

May 2001 **ACM SIGMOD Record, Proceedings of the 2001 ACM SIGMOD international conference on Management of data**, Volume 30 Issue 2Full text available: [pdf\(319.67 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Web performance is a key differentiation among content providers. Snafus and slowdowns at major web sites demonstrate the difficulty that companies face trying to scale to a large amount of web traffic. One solution to this problem is to store web content at server-side and edge-caches for fast delivery to the end users. However, for many e-commerce sites, web pages are created dynamically based on the current state of business processes, represented in application servers and databases

Keywords: JDBC, application server, database driven web site, dynamic content caching, invalidation, web acceleration

3 Managing energy and server resources in hosting centers

Jeffrey S. Chase, Darrell C. Anderson, Prachi N. Thakar, Amin M. Vahdat, Ronald P. Doyle

October 2001 **ACM SIGOPS Operating Systems Review, Proceedings of the eighteenth**

ACM symposium on Operating systems principles, Volume 35 Issue 5Full text available:  pdf(1.61 MB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

Internet hosting centers serve multiple service sites from a common hardware base. This paper presents the design and implementation of an architecture for resource management in a hosting center operating system, with an emphasis on *energy* as a driving resource management issue for large server clusters. The goals are to provision server resources for co-hosted services in a way that automatically adapts to offered load, improve the energy efficiency of server clusters by dynamically res ...

4 Client-server computing in mobile environments 

Jin Jing, Abdelsalam Sumi Helal, Ahmed Elmagarmid

June 1999 **ACM Computing Surveys (CSUR)**, Volume 31 Issue 2Full text available:  pdf(233.31 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Recent advances in wireless data networking and portable information appliances have engendered a new paradigm of computing, called mobile computing, in which users carrying portable devices have access to data and information services regardless of their physical location or movement behavior. In the meantime, research addressing information access in mobile environments has proliferated. In this survey, we provide a concrete framework and categorization of the various way ...

5 Characterizing the scalability of a large web-based shopping system August 2001 **ACM Transactions on Internet Technology (TOIT)**, Volume 1 Issue 1Full text available:  pdf(261.91 KB)Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

This article presents an analysis of five days of workload data from a large Web-based shopping system. The multitier environment of this Web-based shopping system includes Web servers, application servers, database servers, and an assortment of load-balancing and firewall appliances. We characterize user requests and sessions and determine their impact on system performance scalability. The purpose of our study is to assess scalability and support capacity planning exercises for the multit ...

6 An application of a context-aware file system 

Christopher K. Hess, Roy H. Campbell

December 2003 **Personal and Ubiquitous Computing**, Volume 7 Issue 6Full text available:  pdf(383.26 KB)Additional Information: [full citation](#), [abstract](#), [index terms](#)

Ubiquitous computing environments stretch the requirements of traditional infrastructures used to facilitate the development of applications. Activities are often supported by collections of applications, some of which are automatically launched with little or no human intervention. This task-driven environment challenges existing application construction and data management techniques. In this paper, we describe a file system that organises application data based on contextual information, impo ...

9 Research sessions: distributed systems: Proxy-based acceleration of dynamically generated content on the world wide web: an approach and implementation

Anindya Datta, Kaushik Dutta, Helen Thomas, Debra VanderMeer, Suresha, Krithi Ramamirtham

June 2002 **Proceedings of the 2002 ACM SIGMOD international conference on Management of data**

Full text available:  [pdf\(1.37 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

As Internet traffic continues to grow and web sites become increasingly complex, performance and scalability are major issues for web sites. Web sites are increasingly relying on dynamic content generation applications to provide web site visitors with dynamic, interactive, and personalized experiences. However, dynamic content generation comes at a cost --- each request requires computation as well as communication across multiple components. To address these issues, various dynamic content cach ...

10 Approaches to fault-tolerant and transactional mobile agent execution---an algorithmic view

Stefan Pleisch, André Schiper
September 2004 **ACM Computing Surveys (CSUR)**, Volume 36 Issue 3

Full text available:  [pdf\(946.94 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Over the past years, mobile agent technology has attracted considerable attention, and a significant body of literature has been published. To further develop mobile agent technology, reliability mechanisms such as fault tolerance and transaction support are required. This article aims at structuring the field of fault-tolerant and transactional mobile agent execution and thus at guiding the reader to understand the basic strengths and weaknesses of existing approaches. It starts with a discu ...

11 The AROUND architecture for dynamic location-based services

Rui José, Adriano Moreira, Helena Rodrigues, Nigel Davies
August 2003 **Mobile Networks and Applications**, Volume 8 Issue 4

Full text available:  [pdf\(194.30 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper presents a generic concept of location-based service as an abstraction for supporting the association between computational resources and location. The objective is to extend the advantages of service-based architectures to the development of location-based systems, thus providing a more open and extensible alternative to the "vertical" approaches typically used in this type of system. The novel AROUND architecture is proposed as an approach for supporting location-based services in t ...

12 Promises and reality: Server I/O networks past, present, and future

Renato John Recio
August 2003 **Proceedings of the ACM SIGCOMM workshop on Network-I/O convergence: experience, lessons, implications**

Full text available:  [pdf\(225.62 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Enterprise and technical customers place a diverse set of requirements on server I/O networks. In the past, no single network type has been able to satisfy all of these requirements. As a result several fabric types evolved and several interconnects emerged to satisfy a subset of the requirements. Recently several technologies have emerged that enable a single interconnect to be used as more than one fabric type. This paper will describe the requirements customers place on server I/O networks; t ...

14 Practical byzantine fault tolerance and proactive recovery

Miguel Castro, Barbara Liskov
November 2002 **ACM Transactions on Computer Systems (TOCS)**, Volume 20 Issue 4

Full text available:  [pdf\(1.63 MB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#), [review](#)

Our growing reliance on online services accessible on the Internet demands highly available systems that provide correct service without interruptions. Software bugs, operator mistakes, and malicious attacks are a major cause of service interruptions and they can cause arbitrary behavior, that is, Byzantine faults. This article describes a new replication algorithm, BFT, that can be used to build highly available systems that tolerate Byzantine faults. BFT can be used in practice to implement re ...

15 Application-layer mobility using SIP

Henning Schulzrinne, Elin Wedlund

July 2000 **ACM SIGMOBILE Mobile Computing and Communications Review**, Volume 4
Issue 3

Full text available: [pdf\(1.34 MB\)](#)

Additional Information: [full citation](#), [abstract](#), [citations](#), [index terms](#)

Supporting mobile Internet multimedia applications requires more than just the ability to maintain connectivity across subnet changes. We describe how the Session Initiation Protocol (SIP) can help provide terminal, personal, session and service mobility to applications ranging from Internet telephony to presence and instant messaging. We also briefly discuss application-layer mobility for streaming multimedia applications initiated by RTSP.

16 Virtual machine monitors: Terra: a virtual machine-based platform for trusted computing

Tal Garfinkel, Ben Pfaff, Jim Chow, Mendel Rosenblum, Dan Boneh

October 2003 **Proceedings of the nineteenth ACM symposium on Operating systems principles**

Full text available: [pdf\(140.31 KB\)](#)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We present a flexible architecture for trusted computing, called Terra, that allows applications with a wide range of security requirements to run simultaneously on commodity hardware. Applications on Terra enjoy the semantics of running on a separate, dedicated, tamper-resistant hardware platform, while retaining the ability to run side-by-side with normal applications on a general-purpose computing platform. Terra achieves this synthesis by use of a *trusted virtual machine monitor* (TVMM ...)

Ubiquitous computing requires flexibility. Meltting distributed electronic devices into everyday's life implies the need to adapt to evolving standards and dynamic environments. Furthermore, to gain user acceptance, such devices should be able to adapt to different usage patterns and user profiles. Scalability is also an important issue, allowing functional enhancements to already deployed systems. In this work we address these issues applying the concept of reconfigurability on different abstract ...

10 A survey of customizability in operating systems research

G. Denys, F. Piessens, F. Matthijs

December 2002 **ACM Computing Surveys (CSUR)**, Volume 34 Issue 4

Full text available: [pdf\(149.83 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

An important goal of an operating system is to make computing and communication resources available in a fair and efficient way to the applications that will run on top of it. To achieve this result, the operating system implements a number of policies for allocating resources to, and sharing resources among applications, and it implements safety mechanisms to guard against misbehaving applications. However, for most of these allocation and sharing tasks, no single optimal policy exists. Differe ...

 Full text available: [pdf\(483.39 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

The development of hypermedia/multimedia systems requires the implementation of an élément, usually known as *formatter*, which is in charge of receiving the specification of a document (structure, media-object relationships and presentation descriptions) and controlling its presentation. The process of controlling and maintaining the presentation of a hyperdocument with an output of acceptable quality is a QoS orchestration problem, which needs to be treated by formatters in two related le ...

Keywords: hyperProp system, hypermedia formatter, media synchronization, quality of service

2 Computer networks (CN): A functional architecture for self-aware routers

Damien Galand, Oliver Marcé

 March 2004 **Proceedings of the 2004 ACM symposium on Applied computing**

 Full text available: [pdf\(300.20 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

In this paper, we first present the concept of self-configuration and self-provisioning applied into the scope of the IP routers. A global view of the concepts which are addressed in this document is given, considering the automation level of the operations, and their communication schemes. The node characteristics that are taken into account in the definition of self-configuration and self-provisioning mechanisms are also detailed, introducing the second part of the paper. In this part, a refer ...

Keywords: IP router, self-configuration

3 Self-aware management of IP networks with QoS guarantees

Francine Krief

 September 2004 **International Journal of Network Management**, Volume 14 Issue 5

 Full text available: [pdf\(204.98 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Self-aware management allows the network to react and to adapt to changes of situation. In

this paper an architecture is described for self-aware management of IP networks offering QoS guarantees. This architecture uses policy-based management and multi-agent systems. The originality of the present approach lies in the intention to give a real autonomy to the components intervening in the chain of services in terms of internal decisions and configuration. Our solution allows the self-configuration ...

4 Full papers: A taxonomy of DDoS attack and DDoS defense mechanisms

Jelena Mirkovic, Peter Reiher

April 2004 **ACM SIGCOMM Computer Communication Review**, Volume 34 Issue 2

Full text available:  pdf(209.38 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

Distributed denial-of-service (DDoS) is a rapidly growing problem. The multitude and variety of both the attacks and the defense approaches is overwhelming. This paper presents two taxonomies for classifying attacks and defenses, and thus provides researchers with a better understanding of the problem and the current solution space. The attack classification criteria was selected to highlight commonalities and important features of attack strategies, that define challenges and dictate the design ...

5 Service requirements and design methodology: Pitfalls of OWL-S: a practical semantic web use case

Steffen Balzer, Thorsten Liebig, Matthias Wagner

November 2004 **Proceedings of the 2nd international conference on Service oriented computing**

Full text available:  pdf(872.04 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

OWL-S is a combined effort of the Semantic Web and the Web Service community to facilitate an intelligent service provisioning on the Semantic Web. The vision of OWL-S includes automatic service discovery, invocation, composition, orchestration and monitoring of Web-Services through their semantic descriptions. In this paper, we investigate the practical applicability of the current OWL-S specification and show that, in spite of the large momentum of OWL-S, significantly more work needs to be ...

Keywords: OWL-S, semantic web services

6 Modelling and performance evaluation of mobile multimedia systems using QoS-GSPN

Tony Tsang

November 2003 **Wireless Networks**, Volume 9 Issue 6

Full text available:  pdf(200.92 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Quality of Service (QoS) measurement of multimedia applications is one of the most important issues for call handoff and call admission control in mobile networks. Based on the QoS measures, we propose a Generalized Stochastic Petri Net (GSPN) based model, called QoS-GSPN, which can express the real-time behavior of QoS measurement for mobile networks. QoS-GSPN performance analysis methodology includes the formal expression and performance analysis environment. It offers the promise of providing ...

Keywords: QoS, QoS-GSPN, mobile system, multimedia system

7 Minerva: An automated resource provisioning tool for large-scale storage systems

Guillermo A. Alvarez, Elizabeth Borowsky, Susie Go, Theodore H. Romer, Ralph Becker-Szendy, Richard Golding, Arif Merchant, Mirjana Spasojevic, Alistair Veitch, John Wilkes

November 2001 **ACM Transactions on Computer Systems (TOCS)**, Volume 19 Issue 4

Full text available:  pdf(701.98 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Enterprise-scale storage systems, which can contain hundreds of host computers and storage devices and up to tens of thousands of disks and logical volumes, are difficult to design. The volume of choices that need to be made is massive, and many choices have unforeseen interactions. Storage system design is tedious and complicated to do by hand, usually leading to solutions that are grossly over-provisioned, substantially under-performing or, in the worst case, both. To solve the configuration ni ...

8 Service design and modeling: A service re-design methodology for multi-channel adaptation

M. Comerio, F. De Paoli, S. Grega, C. Batini, C. Di Francesco, A. Di Pasquale
November 2004 **Proceedings of the 2nd international conference on Service oriented computing**

Full text available:  pdf(632.66 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Many available services have been designed for a single-channel world, Web and Internet typically. In a real world scenario, an ever-growing number of users take advantage of different kinds of communication channels and devices. In this paper, we propose a methodology to formalize the re-design process of these services to support multi-channel access in different contexts. The methodology considers the channel characteristics, the location of users and the context of use to characterize the ...

Keywords: context of use, location awareness, methodology, multi-channel application, qualities of services, service re-design

9 Game infrastructure: Implementation of a service platform for online games

Anees Shaikh, Sambit Sahu, Marcel Rosu, Michael Shea, Debanjan Saha
August 2004 **Proceedings of ACM SIGCOMM 2004 workshops on NetGames '04: Network and system support for games**

Full text available:  pdf(319.22 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Large-scale multiplayer online games require considerable investment in hosting infrastructures. However, the difficulty of predicting the success of a new title makes investing in dedicated server and network resources very risky. A shared infrastructure based on utility computing models to support multiple games offers an attractive option for game providers whose core competency is not in managing large server deployments. In this paper we describe a prototype implementation of a shared, on de ...

10 Quality of service: QoS computation and policing in dynamic web service selection

Yutu Liu, Anne H. Ngu, Liang Z. Zeng
May 2004 **Proceedings of the 13th international World Wide Web conference on Alternate track papers & posters**

Full text available:  pdf(146.50 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [citations](#), [index terms](#)

The emerging Service-Oriented Computing (SOC) paradigm promises to enable businesses and organizations to collaborate in an unprecedented way by means of standard web services. To support rapid and dynamic composition of services in this paradigm, web services that meet requesters' functional requirements must be able to be located and bounded dynamically from a large and constantly changing number of service providers based on their Quality of Service (QoS). In order to enable quality-driven we ...

11 Mobility, roaming, and handoff: Network selection and discovery of service information in public WLAN hotspots 

Yui-Wah Lee

October 2004 **Proceedings of the 2nd ACM international workshop on Wireless mobile applications and services on WLAN hotspots**

Full text available:  pdf(276.09 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

In a public WLAN hotspot, a roaming mobile terminal (MT) may be within radio range of more than one access point (AP), each of which may or may not have roaming agreements with the service provider of the user of the MT. In this case, the MT may need to discover some <i>service information</i> before it can make an intelligent <i>network-selection</i> decision. The most critical is <i>roaming information</i>; while other information such as <i>security policies</i> ...

Keywords: Wi-Fi, discovery of service information, network selection, public WLAN hotspots, roaming

12 Customer service evaluation in the telephone service provisioning process 

Shinya Ozeki, Noriyuki Ikeuchi

December 1992 **Proceedings of the 24th conference on Winter simulation**

Full text available:  pdf(726.46 KB) Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

13 Experimental testbeds and data: Performance optimizations for wireless wide-area networks: comparative study and experimental evaluation 

Rajiv Chakravorty, Suman Banerjee, Pablo Rodriguez, Julian Chesterfield, Ian Pratt

September 2004 **Proceedings of the 10th annual international conference on Mobile computing and networking**

Full text available:  pdf(262.46 KB) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

We present a comparative performance study of a wide selection of optimization techniques to enhance application performance in the context of wide-area wireless networks (WWANs). Unlike in traditional wired and wireless IP-based networks, applications running over WWAN cellular environments are significantly affected by the vagaries of the cellular wireless medium. Prior research has proposed and analyzed optimizations at individual layers of the protocol stack. In contrast, we introduce the fi ...

14 Papers from Hotnets-II: The cutting EDGE of IP router configuration 

Don Caldwell, Anna Gilbert, Joel Gottlieb, Albert Greenberg, Gisli Hjalmysson, Jennifer Rexford
January 2004 **ACM SIGCOMM Computer Communication Review**, Volume 34 Issue 1

Full text available:  pdf(199.41 KB) Additional Information: [full citation](#), [abstract](#), [references](#)

Human error in configuring routers undermines attempts to provide reliable, predictable end-to-end performance on IP networks. Manual configuration, while expensive and error-prone, is the dominant mode of operation, especially for large enterprise networks. These networks often lack the basic building blocks---an accurate equipment inventory, a

debugged initial configuration, and a specification of local configuration policies---to support the holy grail of automation. We argue the *migrating* ...

15 Learning User Preferences for Wireless Services Provisioning

G. Lee, S. Bauer, P. Faratin, J. Wroclawski

July 2004 **Proceedings of the Third International Joint Conference on Autonomous Agents and Multiagent Systems - Volume 1**

Full text available:  [pdf\(179.24 KB\)](#) Additional Information: [full citation](#), [abstract](#)

The problem of interest is how to dynamically allocate wireless access services in a competitive market which implements a take-it-or-leave-it allocation mechanism. In this paper we focus on the subproblem of preference elicitation, given a mechanism. The user, due to a number of cognitive and technical reasons, is assumed to be initially uninformed over their preferences in the wireless domain. The solution we have developed is a closed-loop user-agent system that assists the user in applicatio ...

16 Analysis methodology: Simulation of large networks: modeling and simulation of telecommunication networks for control and management

John S. Baras

December 2003 **Proceedings of the 35th conference on Winter simulation: driving innovation**

Full text available:  [pdf\(812.19 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#)

In this paper we describe methodologies for telecommunication networks modeling and simulation that are targeted to be useful as tools in on-line and off-line decision making of the type encountered in network control, management and planning problems. We describe the development, validation and use of self-similar and multi-fractal models, queuing control and performance evaluation, assessing the incremental utility of various models, hierarchical models based on aggregation, analytic approx ...

17 Scientific and business applications: survey of progress and trend of development and use of automatic data processing in business and management control systems of the Federal Government, as December 1957—II

May 1959 **Communications of the ACM**, Volume 2 Issue 5

Full text available:  [pdf\(609.29 KB\)](#) Additional Information: [full citation](#)

18 An open architecture for next-generation telecommunication services

Gregory W. Bond, Eric Cheung, K. Hal Purdy, Pamela Zave, J. Christopher Ramming
February 2004 **ACM Transactions on Internet Technology (TOIT)**, Volume 4 Issue 1

Full text available:  [pdf\(237.24 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

An open (in the sense of extensible and programmable) architecture for IP telecommunications must be based on a comprehensive strategy for managing feature interaction. We describe our experience with BoxOS, an IP telecommunication platform that implements the DFC technology for feature composition. We present solutions to problems, common to all efforts in IP telecommunications, of feature distribution, interoperability, and media management. We also explain how BoxOS addresses many deficiencie ...

19 A distributed networking system for multimedia internet access service using ATM over ADSL

Daniel Won-Kyu Hong, Choong Seon Hong

November 2004 **International Journal of Network Management**, Volume 14 Issue 6

Full text available: [pdf\(608.19 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

This paper proposes a distributed networking system architecture for Internet-access service provision using ATM over xDSL technology. We describe the hierarchical network model in deploying ADSL services across the ATM access networks, which can easily accommodate the explosive growth of ADSL subscribers in the future. In addition, this paper describes the distributed networking system and its capability to provide a systemic network management using the principal networking concepts of serv ...

20 Adaptive QoS management for IEEE 802.11 future wireless ISPs

Hakima Chaouchi, Anelise Munaretto

July 2004 **Wireless Networks**, Volume 10 Issue 4

Full text available: [pdf\(299.46 KB\)](#) Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Wireless Internet Service Providers (WISPs) are expected to be the new generation of access providers using the emerging IEEE 802.11 technology. Face to the high competition of providing network services, the WISP have to offer the best service to the users. For this purpose, the WISP networks' managers need to provide Quality of Service (QoS) with a minimum cost in their wireless networks. The current link layer IEEE 802.11b provides fair sharing of the radio resource with no service differenti ...
